Recent ethnographic researches have for the most part concentrated upon the Kamayurá (Galvão 1949, 1950, and 1952; Oberg 1953), the Waurá (de Lima 1949, 1950), and the Kuikuru (Robert Carneiro and Gertrude E. Dole, unpublished). Only incidentally have these observers commented upon the Trumaí. Therefore, in 1953 when I had the opportunity to spend a little time in the upper Xingú area, I made a point of remaining a few days with the remants of the Trumaí. They were camped temporarily at Karajaja, the old village site, on a lake about half a mile away from the Kuluene River; their permanent houses were then at Anariatan, near the village site during Quain's visit. It was the dry season and the Trumaí were fishing. There were only 24 persons in the group — six adult males, ten adult females, four boys and four girls. Three of the women were unmarried widows, and there was one unmarried girl just past puberty. The chieftain whose current name was Ilitoari (no doubt the Aloari of Quain's notes), was married to two sisters, and there were four monogamous families. Two of the men were old and unmarried. Thus, the Trumaí were again united as a village (they had disbanded for a while). In 1953, however, there were not even enough men for the Trumaí to participate in the intertribal spear-throwing contests, a sport in which they had once been famous throughout the area.

The process of steady social and cultural disintegration and depopulation, which was already apparent among the Trumaí in 1938, has been a continuing one; and it is only a question of a very short time before these people cease to exist as a separate tribal group. Thus, the information and insights that Robert Murphy has brought together from Buell Quain's field work may be all that we shall ever have on Trumaí life and society.

significant that Aloari, probably the most aggressive person in the village, was often an organizer and always a main participant in the games. On the other hand, he never cooperated in group work.

This conventionalized form of exchange, which Quain called the trade game, had a strong functional role in Trumaí culture, but there are indications that it was of outside origin. One informant said that it was a Bakairí custom, and Quain thought that the "game" might have been introduced by Bakairí traders bringing goods from the Indian post on the Paranatinga River.[1]

The Household

Among both the Waurá and the Kamayurá the extended family occupied its own house, and the head of the lineage was considered a sub-chief of the village.[2] Such unilocal, co-resident and extended family groupings, which were typical among tribes of the upper Xingú, were absent in the Trumaí village.

Consanguineally close male relatives usually formed co-resident units, but these nucleii of kinsmen were very small and did not constitute an entire household. Furthermore, they were related to each other through male or female lines. Due to village patrilocality, there was a tendency for patrilineally related males to live together, but this did not result in the establishment of a patrilineal lineage for several reasons. Among them the high death rate was very important.

Maibu's house illustrates the eclectic nature of the Trumaí household. Four nuclear families, totaling fourteen people, lived in it. Hanging their hammocks from one of the two center posts were Katauka, his son Kamkuti, his brother's son Autsuki, and another brother's son and his wife. At the opposite end of the house were Maibu and his wife, the wife's son by Maibu's deceased brother, Maibu's sister Ayenuke, Makurawa, a classificatory sister's son, and Makurawa's wife and their three children. Although everyone in the household was related, bonds were closer between those people who hung their hammocks from the same post.

Despite the fact that the household, as a unit, had no specific functions, it established the framework within which certain interpersonal dependencies were worked out. Bride-capture, intertribal warfare, divorce, and early death caused a significant proportion of the Trumaí to be temporarily or permanently without mates. This disadvantage was

[1] The trade game was possibly borrowed from the Bakairí, as its existence among this group has been reported by Oberg (1953, p. 72). However, craft specialization and trade on the upper Xingú predates the Indian post. Cf. von den Steinen 1897, pp. 166, 207.

[2] De Lima (1950, p. 9.) reports this arrangement among the Waurá, and Oberg (1953, p. 45.) adds that the position of house chief tends to pass in the male line in the Kamayurá village.

mitigated by intra-household sharing and the performance of services, normally done by mates, by co-resident relatives of the opposite sex. In this way unmarried persons could be integrated within the Trumaí economy.

Among the twenty-eight persons of marriage age in the Trumaí village, there were only eight unions involving seventeen persons. The eleven unmarried included one widower with a young child, one divorced man with a child, three widows with children, four unmarried men, and two unmarried women.

One of the widows was married during Quain's sojourn, but the other two were considered too old. One of the unmarried women subsequently took a mate, but the other, who had a clubfoot, was thought to be too old and ugly for marriage, although several men had sexual relations with her. Two of the unmarried men were probably also considered too old for marriage, a third was seeking a wife, and the fourth showed little interest in obtaining one. Neither the widower nor the divorced man were seeking wives at the time.

All these persons had made some sort of adjustment through their relatives. The incorporation of two of the unmarried men and of one of the widows into Nitvary's household shows how a functional interdependence within the household was achieved, despite the lack of a lineage in residence. Living at one end of the house were two old unmarried men, Yahu and Yakuma. At the other end were Nitvary, his wife Kaiti, his widowed mother Fayeru, and his young sister Kayaya. Gift-giving and food-sharing went on between all of the people in the house, but the two single men depended most on Fayeru, whom they called "sister," while Nitvary's needs were provided for by his wife. The members of the household were all dependent on each other, as Kaiti alone would have been hard pressed to do woman's work for two more men. Their presence, however, meant more food for the house.

In Aloarí's house his unmarried brother Tun provided food for the cooking pots of Aloarí's wife Yumununwa, while her brother Oirupa exchanged services with his classificatory sister Yawala, the club-footed woman. By this free flow of food and service, which was especially marked between the sexes, each individual was economically fully functional, and everyone in the household was adequately cared for.

Most of the arguments in the village occurred between members of different houses. Aloarí, his brother, and his brother-in-law showed considerable personal antipathy toward Maibu and jealousy of his status as chief. When a serious conflict broke out in the village over a marriage, it took the form of verbal quarrels between members of different houses.

The greater amity between co-residents was due to a number of factors. First, closer kinship ties usually prevailed, second, people on
